

Cisco CCNA1 Intro to Networks

State ID: SC-ENW-V1351

About this course

Gain the fundamentals of networking in a customised, small group, Cisco lab environment.

This course introduces the architecture, structure, functions, components, and models of the internet and other computer networks. You'll have small class sizes with instructor led delivery from start to finish. You'll gain skills to install, configure, operate, and troubleshoot medium-size routed and switched networks.

Whether you are trying to gain an entry level position in a network engineering role or improve your employability skills, this course can help you on your way to certification.

This course is an introduction course and a basic understanding of computers and Linux is desirable.

You can find more information with our [flyer](#).
