Come along to our Tungsten inert Gas (TIG) Welding course and learn professional techniques on a variety of ferrous and non ferrous metals. We can train you how to use the GTAW (TIG) welding process in Carbon Steel, Aluminium and Stainless Steel.

We start with recognising hazards and safe use of the welding equipment also welding terminology and defects. You will receive demonstrations and guidance on correct technique and the opportunity to develop your GTAW skills over the duration of the course.

You will be required to wear personal protective clothing/equipment at all times which includes steel capped safety boots, clear safety glasses, long drill cotton pants and cotton drill long sleeve shirt.

Enhance your current skills or try something new and fascinating.
